

ABSTRACTFORMULA MILK PREPARATION APPARATUS AND METHOD

5 Formula milk preparation apparatus 10 comprises a support structure 12, and first and
second containers 14 and 16 supported by the support structure 12. The first container
14 is adapted to hold a liquid, and the second container 16 is adapted to hold
powdered formula milk. Means (24) for regulating the temperature of the contents of
the first container 14 is provided, as is means (26,32) for dispensing an amount of
10 content of the first and second containers 14 and 16. Means (56) for mixing together
the contents dispensed from the first and second containers, and means for cooling the
contents dispensed from the first and second containers to a temperature suitable for
consumption are also provided. A method of using the apparatus is also provided.
